THE FIRST 1000kV UHV TRANSFORMER HAS BEEN SUCCESSFULLY PRODUCED BY SPECO

On 22nd September 2011, the first single phase 400MVA/1000kV UHV, oil immersed transformer with forced air cooling has been successfully produced by SPECO. This transformer, with fully independent intellectual property, has passed the type tests once and for all. The performance parameters have been on the first rate conform to the international level. This great achievement, definitely, is the milestone in the progress of technology research and development and marks that SPECO possessing the capability of manufacturing full range voltage, from 10 to 1000kV, and various capacities products.

SPECO is a large state-owned enterprise subjected to China Electric Power Equipment and Technology Co. Ltd. (CET), which is the sole subsidiary of State Grid Corporation of China (SGCC). Since 1958, SPECO has been established and fully committed to the research and development of power transformer. SPECO has produced more than 1200 sets of 110kV transformers. Proximately 300 sets of the products have been exported abroad. SPECO has made great contribution to the electric power industry domestic as well as worldwide.

SPECO, bering the spirit of "To surpass ourselves to pursue excellence", aiming devote ourselves to continuous improvement and innovations, will always provide the excellent services to our customers.
